

Color Report

Warm colors like red orange and yellow evoke heat and excitement. We call them warm colors because they come from sources like fire or the sun.

Cool colors are blue, green, and violet. They communicate a calmer energy, mimicking colors from the calm sky, ice, and ocean (Braam 2018).

Placing a color directly next to it's complimentary color creates an uncomfortable visual artifact and makes the creation hard to read. Adding in a neutral color, such as black or white, creates a separation that will allow the colors to pop as they should. You can further adjust the contrast created by complimentary colors by adjusting the value or tone of one of the colors. This can be checked by using a neutral black and white filter on the creation to check contrast levels (Complimentary Colors, 2019).

Understanding that color has different symbolism is important to avoid messages being sent that were not intended by the color choices. For example in Western society, red communicates passion and love, but in another society such as Hebrew it represents sacrifice (Girard 2019).
